

# SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: Christy Green Examiner #: 77561 Date: 3/6/03  
Art Unit: 385 Phone Number 308 9693 Serial Number: 10/064 989  
Mail Box and Bldg/Room Location: 606 Results Format Preferred (circle): PAPER (DISK) E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

\*\*\*\*\*

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Simulated Exposed Roof rafter end

Inventors (please provide full names): William Seldon

Earliest Priority Filing Date: 9/6/02

\*For Sequence Searches Only\* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Looking for a roof rafter end <sup>cap</sup> that can be attached to an existing rafter end or that is provided with an extension as "10" shows in fig. 1. (Attached).

Its a sleeve type end cap.

Thank you! Claims 1-6 and 16-21 are the Pertinent claims, focus on the cap (cap) that's what can't be found

The linear housing complex on the northern edge of Ingolstadt adds definition to this part of town. The simple, neatly ordered rows of housing display a wide variety of housing types and structures. Each unit has access to its own outdoor space - a garden or a wooden roof terrace. The ventilated flat roof is a light, concave steel construction with a radius of 30 m. Rain protection is afforded by a corrugated aluminium \*covering\* with a central \*gutter\*. Outer walls are faced with colour sprayed aluminium sheets.

To be able to repair the framework structure the timber had to be accessible from all sides. For this the house was reduced to the pure timber construction. That is, framework, roofing and flooring were removed to an extent that only the naked timber construction remained. After safeguarding the framework skeleton a post and beam system was built inside at a distance of 10 cm on the new foundation which later was to bear the load of the roof framing and the entire interior design. The old framework structure then only bore its dead weight. At some places the framework structure was clearly deformed or lowered due to ageing, soil subsidence and climatic effects. Posts and heads were hydraulically placed in the vertical and horizontal position. The ~~\*rafter\* roof was \*covered\*~~ by a foil covering and a lathing. Decayed and rotten timber were removed. From a demolished half timbered house there was enough well preserved oakwood available which had about the same qualities as the wood used for the house to be repaired.
